

AMSTAR-vurderinger af systematiske reviews

National klinisk retningslinje om førstegangsfødende med dystoci (mangler fremgang)

Ni systematiske reviews blev efter finsortering udvalgt til AMSTAR-vurdering.

Tre blev inkluderet i den endelige udarbejdelse af retningslinjen, men flere af de øvrige refereres i baggrundslitteraturen eller som indirekte evidens. Hvert review blev vurderet af mindst ét arbejdsgruppemedlem og af fagkonsulenten, således at hvert review blev vurderet af mindst to personer.

Bugg GJ, Siddiqui F, Thornton JG. Oxytocin versus no treatment or delayed treatment for slow progress in the first stage of spontaneous labour. Cochrane Database of Systematic Reviews 2013.²⁰

Observer	1	2
Citation	Bugg 2013	Bugg 2013
PICO number	1	1
PICO name	Hvornår skal man tilbyde vestimulering med oxytocin ved dystoci i udvidelsesfasen (1. stage)	oxytocin vs. no/placebo, early vs. late oxytocin
List relevant outcomes	Kritiske: Apgar <7 ved 5 minutter, alvorlig neonatal morbiditet (defineret af forfatterne)+ perinatal død (dvs samlet effektmål), indlæggelse på NICU. Vigtige: Akut sectio, instrumental forløsning, Postpartum blødning (defineret af forfatterne), kvindens tilfredshed	Ceasareans, fetal / maternal morbidity, satisfaction
Was meta-analysis performed for the relevant outcomes?	Ja, men mange af vores outcomes belyses ikke (navlesnors-ph, Sarnat score, Thompson score, maternel infektion, sphincterruptur, inkontinens, amning, bonding, secio på maternal request ved næste fødsel).	Ja
1. Was an 'a priori' design provided?	Ja	Ja
2. Was there duplicate study selection and data extraction?	Ja	Ja
3. Was a comprehensive literature search performed?	Ja	Ja
4. Was the status of publication (i.e. grey literature) used as an inclusion criterion?	Kan ikke besvares.	Ja
5. Was a list of studies (included and excluded) provided?	Ja	Ja
6. Were the characteristics of the included studies provided?	Ja	Ja

7. Was the scientific quality of the included studies assessed and documented?	Ja	Ja
8. Was the scientific quality of the included studies used appropriately in formulating conclusions?	Ja	Ja
9. Were the methods used to combine the findings of studies appropriate?	Ja	Ja
10. Was the likelihood of publication bias assessed?	Ja	Ja
11. Was the conflict of interest included?	Nej	Ja
Notes	<p>Størstedelen af de inkluderede er førstegangsfødende. Igangsatte fødsler og tidlige sectio er ekskluderet. Forskellige definitioner af dystoci (<½ cm/time til 1 cm/time eller ingen ændring i 2 timer). Forskelligt om vandet er gået inden opstart af oxytocin, eller om der skal foretages amniotomi inden opstart af oxytocin. Forskellige doser af oxytocin (i et, meget lille studie, anvendes dextrose - er det mon sukkervand). Forskellig ventetid i studier der sammenligner med oxytocin nu og senere (op til 8 timer).</p>	Tidlig oxytocin giver flere pat FHR OG 2 timer kortere fødsel end sen oxytocin. Sectio/VE ens.
Anvendes i NKR dystoci?	Ja	Ja

Lavender T, Hart A, Smyth RM.

Effect of partogram use on outcomes for women in spontaneous labour at term.
Cochrane Database Systematic Reviews. 2013 Jul 10;7:CD005461.

Observer	1	2
Citation	Lavender 2013	Lavender 2013
PICO number	1	1
PICO name	Hvornår skal man tilbyde vestimulering med oxytocin ved dystoci i udvidelsesfasen (1. stage)	partogram vs. no, 3 vs. 4 h. action line
List relevant outcomes	Kritiske: Apgar <7 ved 5 minutter, navlesnors-pH <7,1 (vi har angivet >7 som outcome), alvorlig neonatal morbiditet (defineret af forfatterne)+ perinatal død (dvs samlet effektmål), indlæggelse på NICU. Vigtige: Akut sectio, instrumental forløsning, Postpartum blødning (>500 ml), alvorlig maternel morbiditet eller død og negativ fødselsoplevelse	caesareans, VE, Apgar, death, haemorrhage, tears, experience
Was meta-analysis performed for the relevant outcomes?	Ja, men mange af vores outcomes belyses ikke (Sarnat score, Thompson score, maternel infektion(dog er brug af inkontinens med), sphincterruptur, inkontinens, amning, bonding, secio på maternal request ved næste fødsel).	Ja
1. Was an 'a priori' design provided?	Ja	Ja
2. Was there duplicate study selection and data extraction?	Ja	Ja
3. Was a comprehensive literature search performed?	Ja	Ja
4. Was the status of publication (i.e. grey literature) used as an inclusion criterion?	Ja	Ja
5. Was a list of studies (included and excluded) provided?	Ja	Ja
6. Were the characteristics of the included studies provided?	Ja	Ja
7. Was the scientific quality of the included studies assessed and documented?	Ja	Ja
8. Was the scientific quality of the included studies used	Ja	Ja

appropriately in formulating conclusions?		
9. Were the methods used to combine the findings of studies appropriate?	Ja	Ja
10. Was the likelihood of publication bias assessed?	Ja	Ja
11. Was the conflict of interest included?	Nej	Ja
Notes	<p>Kun spontane fødsler er inkluderet i reviewet.</p> <p>Reviewet sammenligner brug af partogram vs intet brug af partogram, samt forskellige placeringer af actionline, men angiver ikke, hvilke faser af fødslen det drejer sig om.</p> <p>Formentlig er det hele fødslen. Normalt er actionline vel mest i anvendelse i first stage, hvor man i second stage har foruddefineret tidsgrænser (ex max en times aktiv presseperiode). Det er derfor uklart om reviewet kan anvendes i forhold til P1-P3 eller kun i P1.</p> <p>Desuden er interventionen "partogram" og ikke oxytocindrop på forskellige tidspunkter ved dystoci (eller ingen behandling).</p> <p>Behandlingen i intervention og kontrolgruppe i reviewet er ikke nødvendigvis oxytocin men kan ligesåvel være amniotomi (eller andet som er en del af en afdelings retningslinjer når actionline er overskredet).</p> <p>Det er derfor uklart, om dette review overhovedet kan anvendes til at besvare P1-P3. OBS at Pattinson 2003 sammenligner aggressive or expectant management hvor behandling er oxytocin, men dette studie blev ikke inkluderet i reviewet af Bugg, GJ 2013, og bør måske derfor ikke anvendes?</p>	Færre sectioer v. 4 vs. 3 timer action line, øvrige outcomes ens
Anvendes i NKR dystoci?	Nej	Nej

Wei S, Wo BL, Qi HP, Xu H, Luo ZC, Roy C, Fraser WD.

Early amniotomy and early oxytocin for prevention of, or therapy for, delay in first stage spontaneous labour compared with routine care.

Cochrane Database Syst Rev. 2013 Aug 7;8:CD006794.

Observer	1	2
Citation	Wei 2013	Wei 2013
PICO number	P1? (se dog note)	1
PICO name	Hvornår skal man tilbyde vestimulering med oxytocin ved dystoci i udvidelsesfasen (1. stage)?	early amniotomy + oxytocin vs. routine care
List relevant outcomes	Kritiske: Apgar <7 ved 5 minutter, Acidose (navlesnors pH < 7,10 eller 7,20), indlæggelse på NICU, kramper/neurologiske abnormaliteter (encefalopati?). Vigtige: akut sectio, instrumental forløsning, varighed af first stage, fødslens samlede varighed (fra admission til fødsel), postpartum blødning (>500 ml), infektion (eller feber), kvindens tilfredshed.	caesareans, VE, Apgar, pH, admission, haemorrhage, fever
Was meta-analysis performed for the relevant outcomes?	Ja, men en del af vores outcomes belyses ikke, fx perinatal død, Sarnat score, Thompson score, (encefalopati?), sphincterruptur, inkontinens, blødning > 1000 ml (dog er blodtransfusion med i reviewet som outcome), amning, bonding og sectio på maternal request ved næste fødsel.	Ja
1. Was an 'a priori' design provided?	Ja	Ja
2. Was there duplicate study selection and data extraction?	Ja	Ja
3. Was a comprehensive literature search performed?	Ja	Ja
4. Was the status of publication (i.e. grey literature) used as an inclusion criterion?	Kan ikke besvares.	Ja

8. Was the scientific quality of the included studies used appropriately in formulating conclusions?	Ja	Ja
9. Were the methods used to combine the findings of studies appropriate?	Ja	Ja
10. Was the likelihood of publication bias assessed?	Nej	Ja
11. Was the conflict of interest included?	Nej	Nej
Notes	<p>Kun spontane fødsler er inkluderet i reviewet. Dette review undersøger effekten af tidlig amniotomi+oxytocin til forebyggelse eller behandling af dystoci i first stage. Hovedparten af de inkluderede studier er forebyggende, og jeg mener derfor ikke, de kan anvendes til at besvare P1.</p> <p>Kun tre studier er behandling, nemlig Blanch 1998, Cluett 2004 og Nachum 2010. Studiet af Blanch 1998 er også inkluderet i reviewet af Bugg 2013, som specifikt omhandler vores P1.</p> <p>Studiet af Cluett 2004 er blevet ekskluderet i reviewet af Bugg2013, fordi kontrolgruppen også udsættes for en intervention (immersion in bathpool), som ikke kan sidestilles med ingen behandling/placebo eller oxytocin senere. Af denne grund mener jeg heller ikke, at vi skal inkludere Cluett2004. Studiet af Nachum2010 er ikke blevet vurderet i reviewet af Bugg 2013. Det kan skyldes at et af inklusionskriterierne er, at kvinden skal have haft en forlænget latent fase. Jeg ved ikke, om vi kan bruge Nachum 2010 til vores P1, jeg tror det ikke. Men vi kunne måske godt rekvire</p>	Lidt færre sectioer, 1½ time kortere fødsel, ens mor og barn outcome.

	det og se lidt nærmere på det. Overordnet mener jeg ikke at dette review (Wei2013), kan anvendes til at besvare vores P1.	
Anvendes i NKR dystoci?	Nej	Nej
